ABSTRACT

This report is organized around a series of tables that describe the characteristics of the student population of each institution in Oregon during the fall term of 1972. The data is organized into four sections corresponding to the four types of institutions: the State Department of Higher Education institutions; the independent and private colleges and universities; the community colleges; and the proprietary institutions. In addition to a section on each educational segment, a summary of enrollment data is provided. In this section, the total picture with respect to postsecondary enrollments is presented. Also, comparisons among enrollments in the various educational segments are made. Each section on a particular educational segment begins with a short summary of the general indications of the tables displayed in that section. The tables contain information for each of the institutions on: headcount enrollment by program level, full-time equivalent enrollment by program level, headcount enrollment by residence status, a comparison of headcount and fulltime equivalent enrollment with 1971 levels, and headcount enrollment by major field of study. # I. INTRODUCTION

Comprehensive statewide educational planning requires a reliable data base. This is one of several annual reports published by the Educational Coordinating Council which provides information towards the development of such a data base. The information in this particular report pertains to the distribution of enrollments in Oregon's post-secondary institutions as of Fall 1972.

Information pertaining to enrollments has been gathered from the Oregon State Department of Higher Education institutions, the Oregon independent and private colleges and universities, the Oregon public community colleges, and the Oregon proprietary schools. The data for this report was compiled from the Registrar's records as soon as enrollments stabilized during the Fall term of 1972. The information was secured by mailing a survey form to each institution. The responses were verified by building internal checks within the survey instrument and by checking totals against information obtained from the Higher Education General Information Survey (HEGIS) and against information compiled by other agencies.

The report is organized around a series of tables which describe the characteristics of the student population of each institution during the Fall term of 1972. The data is organized into four sections corresponding to the four types of institutions: the State Department of Higher Education institutions, Section III; the independent and private colleges and universities, Section IV; the community colleges, Section V; and the proprietary institutions, Section VI.

In addition to a section on each educational segment, a summary of

enrollment data is provided in Section II. In this section, the total picture with respect to post-secondary enrollments is presented. Also, comparisons among enrollments in the various educational segments are made. The proprietary school sector is not included in the summary section due to the less than 100 percent response rate from these institutions in the survey and the resulting incomplete total enrollment figure.

Each section on a particular educational segment begins with a short summary of the general indications of the tables displayed in that section. Included in each of Sections III, IV, and V, the sections on the State Department of Higher Education institutions, the independent and private colleges and universitites, and the community colleges, are five separate tables. These five tables contain information for each of the institutions on: headcount enrollment by program level; full-time equivalent enrollment by program level; headcount enrollment by residence status; a comparison of headcount and full-time equivalent enrollment with 1971 levels; and headcount enrollment by major field of study.

Much less information is available on the proprietary schools than on the other three educational segments. The Educational Coordinating Council has for the first time this year, however, gathered enrollment data by major field of study from the various institutions. The information is displayed in tabular form in Section VI, the section on proprietary schools.

Before going on to those sections which deal directly with the enrollment data, some explanation of those terms which are specific to educational statistics is needed. Full-time equivalent enrollment (FTE)

is an especially important concept. Because all students do not carry a full load of classes, full-time equivalent statistics are used to present a more complete picture of the total student load in institutions.

Full-time equivalent enrollment is calculated by dividing a standard number of credit hours considered to be a normal academic load for a full-time student into the total number of credit hours generated by an institution. For students in the Department of Higher Education institutions and the independent and private colleges and universities, 15 credit hours is considered to be a normal load. In the community colleges, 15 credit hours is considered to be a normal load for students enrolled in lower division transfer programs. For students in the vocational programs, 20 credit hours is used as the standard for a normal load.

Finally, something should be said about the system used to classify major fields of study for the purpose of reporting enrollments. Enrollment data broken down by major field of study was collected for the first time this year. Academic programs were classified according to the Higher Education General Information Survey (HEGIS) taxonomy into twenty-four major fields of study including a general academic category for those students with an undeclared major. State Department of Higher Education institutions and independent and private colleges and universities reported their enrollments in terms of these HEGIS categories.

Vocational programs were categorized according to the U. S. Office of Education classification system into seven program areas. Community colleges reported their enrollments broken down into these seven major categories. The proprietary schools reported enrollments broken down

by their own program classification. These programs were then classified into one of the seven major U.S. Office of Education categories.

The Educational Coordinating Council is grateful to the institutions for providing the information contained in this publication.

This project was supported in part by funds received under Title I of the Higher Education Facilities Act from the Division of Academic Facilities of the U.S. Office of Education.

## II. SUMMARY OF STUDENT ENROLLMENT DATA - FALL 1972

Perhaps the most significant trend indicated by the Fall 1972 post-secondary enrollment data is the leveling off of post-secondary enrollments in Oregon. Although the number of students enrolled in post-secondary institutions increased in the Fall of 1972, the percentage increase (2.6%) was the smallest in five years, as seen in Table II-1. Total full-time equivalent enrollment for all three educational segments - the community colleges, the independent and private colleges and universities, and the State Department of Higher Education institutions - actually experienced a small decline of .4% from the Fall of 1971 to the Fall of 1972. One explanation for the contrasting increase in headcount enrollment and decrease in full-time equivalent enrollment is the fact that the community colleges, the only segment in which enrollments increased, represent a larger proportion of total headcount enrollment than total FTE enrollment.

TABLE II - 1

POST-SECONDARY ENROLLMENT GROWTH RATES FALL 1967-68 THRU FALL 1971-72

Percentage Increase (+) or Decrease (-)

| | Fall 67-68 | Fall 68-69 | Fall 69-70 | Fall 70-71 | Fall 71-72 |
|---|---|---|---|---|---|
| Headcount Enrollment | +9.4% | +10.2% | +11.0% | +10.6% | +2.6% |
| Full-Time Equivalent Enrollment | +10.0% | +8.8% | +9.7% | +4.4% | -.4% |

Note: Growth rates are calculated from figures listed in previous Student Enrollment Data reports.

Table II-2 presents both total headcount and full-time equivalent enrollment data for the three educational segments and for all the segments combined. Total headcount enrollment for all three post-secondary educational segments was 138,283 in the Fall of 1972. The largest number of students were enrolled in the community colleges which accounted for 48.5 percent of the total post-secondary enrollment. State Department of Higher Education institutions enrolled 41.3 percent of the total number of students while the independent and private colleges and universities enrolled 10.2 percent of the total students.

State Department of Higher Education institutions ranked first in terms of full-time equivalent enrollment with 53.4 percent of the total number of full-time equivalent students. The community colleges enrolled 32.5 percent of the total number of full-time equivalent students while the independent and private colleges and universities accounted for 14.1 percent of total full-time equivalent enrollment.

As mentioned previously, the community college segment was the only educational segment which experienced an increase in enrollments over 1971 levels. Both the headcount enrollment growth rate (8.2%) and the full-time equivalent enrollment growth rate (2.9%) were the lowest in the last five years, however.[1] In the two other educational segments, both headcount and full-time equivalent enrollments declined. The State Department of Higher Education institutions experienced the largest

---

[1]Information was gathered from previous Student Enrollment Data reports to calculate community college growth rates for the past five years.

TABLE II - 2

TOTAL HEADCOUNT AND FULL-TIME EQUIVALENT ENROLLMENT FOR OREGON'S INSTITUTIONS OF HIGHER EDUCATION BY EDUCATIONAL SEGMENT AND BY PROGRAM LEVEL - FALL '72

| Program Level | Community Colleges | | | Independent and Private Colleges and Universities | | | State Department of Higher Ed. Institutions | | | Total All Segments | | |

| Upper Division Collegiate | 0 | 0 | - | 4,213 | 4,452.7 | 106.0 | 20,429 | 20,454.4 | 100.1 | 24,642 | 24,907.1 | 101.1 |
| Special Under-Graduate | 0 | 0 | - | 682 | 201.5 | 29.5 | 1,741 | 176.2 | 10.1 | 2,423 | 377.7 | 15.6 |
| TOTAL | 17,810 | 12,752.7 | 71.6 | 11,569 | 11,792.6 | 101.9 | 47,185 | 45,205.5 | 95.8 | 76,564 | 69,750.8 | 91.1 |
| Graduate | 0 | 0 | - | 2,548 | 1,902.4 | 74.7 | 9,912 | 6,692.5 | 67.5 | 12,460 | 8,594.9 | 70.0 |
| GRAND TOTAL | 67,069 | 31,608.6 | 47.1 | 14,117 | 13,695.0 | 97.0 | 57,097 | 51,898.0 | 90.9 | 138,283 | 97,201.6 | 70.3 |

percentage decreases with a 2.6 percent decrease in headcount enrollment and a 2.2 percent decrease in full-time equivalent enrollment. Headcount enrollment in the independent and private colleges and universities declined .4 percent over the Fall 1971 level while full-time equivalent enrollment also declined .4 percent.[2]

The three educational segments exhibited noticeable differences with respect to the residency status of their students. In the independent and private colleges and universities, the majority of students (55.3%) were residents of a state other than Oregon. While a significant number of students (17.1%) enrolled in State Department of Higher Education institutions were residents of another state, less than 1 percent of those students enrolled in community colleges came from outside of the state. In both the State Department of Higher Education institutions and the independent and private colleges and universities, the largest number of non-resident students were from the state of California. Among the community colleges, the state contributing the greatest number of non-resident students appears to be Washington.[3]

The State Department of Higher Education institutions can be compared with the independent and private colleges and universities with respect to the distribution of headcount enrollments by major field of study. In the State Department of Higher Education institutions, Education is the discipline with the greatest number of students enrolled, accounting for 16.1 percent of the total number of students. The Social Sciences and

---

[2]Data on enrollment growth rates for the three educational segments was taken from Tables III-4, IV-4, and V-4 found in the following sections of this report.

[3]Data on residency status for the three educational segments was taken from Tables III-3, IV-3, and V-3 found in the following sections of this report.

Business and Management follow with 9.3 percent and 9.1 percent of the total State Department enrollments respectively. In the independent and private colleges and universities, the greatest concentration of students (24.4%) were enrolled in the General Academic category. Theology with 11.9 percent of the total number of students and Education with 9.8 percent of the total students follow as fields of study which enrolled the greatest number of students in the independent and private colleges and universities.[4]

The community colleges reported enrollments by vocational program area in terms of the number of full-time equivalent students, rather than head-count enrollment. The largest concentration of full-time equivalent students was in the Trade and Industrial occupations, accounting for 42.4 percent of all community college students. The Health occupations, the Office occupations and Technical Education all account for approximately 15 percent of the total full-time equivalent enrollment of the community colleges.[5]

In Tables II-3 and II-4, a summary of the distribution of students by major field of study and by program level is presented for the community colleges and the colleges and universities respectively. The Coordinating Council eventually plans to use information such as contained in these tables for projecting future enrollments by major area of study.

In the following sections of this report, student enrollment data for the Fall of 1972 will be presented for each educational segment in more detail. The type of information examined in this summary will be broken down by institution so that institutional comparisons within each educational segment can be made.

---

[4]Data on major fields of study for the State Department of Higher Education institutions and the independent and private colleges and universities was taken from Tables III-5 and IV-5 of this report.

[5]Data on major fields of study for the community colleges was taken from Table V-5.

## III. STATE DEPARTMENT OF HIGHER EDUCATION INSTITUTIONS

The Oregon State Department of Higher Education includes nine institutions who together enrolled 57,097 students in the Fall of 1972. The largest of these institutions in terms of headcount enrollment was the University of Oregon with 15,432 students, followed by Oregon State University (15,184) and Portland State University (13,635). These three institutions accounted for 77.5 percent of the total number of students enrolled in State Department of Higher Education institutions.

In terms of full-time equivalent students, Oregon State University was the largest of the State Department institutions and also the largest institution in the state. A total of 15,311.8 full-time equivalent students were enrolled at OSU, followed by 14,506.3 enrolled at the U of O and 9,913.7 at PSU.

Table III-3 shows that 82.9 percent of those enrolled at the nine State Department institutions are Oregon residents, while 17.1 percent of those enrolled are from outside of the state. The University of Oregon has the largest percentage of students (34.2%) from outside of the state while Oregon College of Education has the smallest percentage (3.8%) of out-of-state students. Of those non-resident students attending State Department institutions, the largest number are from the state of California.

As a whole, the State Department of Higher Education institutions experienced a 2.6 percent decrease in headcount enrollments and a 2.2 percent decrease in full-time equivalent enrollments over Fall 1971 levels. The largest percentage decrease in enrollments occurred at Oregon College

of Education with declines in headcount and full-time equivalent enrollment of 10 percent and 9.5 percent respectively. Out of nine institutions, enrollments climbed in just three - the University of Oregon, the University of Oregon Medical School and Oregon Technical Institute.

Among the State Department of Higher Education institutions, Education proved to be the field of study with the greatest number of students enrolled, accounting for 16.1 percent of the total number of students. The Social Sciences and Business and Management with 9.3 percent and 9.1 percent of the total students enrolled respectively, follow Education as fields of study enrolling the largest number of students. Several institutions exhibited student enrollments which were concentrated in a particular major field which is the specialty of the institution. For example, at Oregon Technical Institute, 52.6 percent of the total student body was enrolled in Engineering. Oregon College of Education and the University of Oregon Dental and Medical Schools also enrolled the majority of their students in their specialty fields.

TABLE III - 1

TOTAL HEADCOUNT ENROLLMENT IN OREGON STATE DEPARTMENT OF HIGHER EDUCATION INSTITUTIONS BY LEVEL OF PROGRAM AND BY INSTITUTION - FALL 1972

| Name of Institution | Total Enrollment | Freshman | | Sophomore | | Junior | | Senior | | Special Undergrad. | | Graduate | |

## IV. INDEPENDENT AND PRIVATE COLLEGES AND UNIVERSITIES

Twenty-one independent and private colleges and universities reported enrollments for Fall term of 1972. The largest institution in this segment both in terms of headcount and full-time equivalent enrollment was Lewis and Clark College. Lewis and Clark reported 2,718 students enrolled followed by the University of Portland (1,985) and Willamette University (1,598). In terms of full-time equivalent enrollments, Lewis and Clark lead with 2,786 while Willamette and the University of Portland totaled 1,696.2 and 1,657.9 respectively.

The private colleges and universities enrolled a greater percentage of out-of-state students (55.3%) than Oregon residents. In this respect, they differed from both the state colleges and universities and the community colleges. The private institution with the largest percentage of students from out-of-state was Reed College with 81.3 percent of its total student body from outside of Oregon. The largest number of non-resident students attending private colleges and universities in Oregon were from the state of California.

As a whole, the private colleges and universities experienced a slight decline in enrollments over Fall 1971 levels. Both total headcount enrollment and total full-time equivalent enrollment decreased .4 percent from the Fall of 1971. Eleven out of the twenty-one private institutions reported increased enrollments while ten institutions reported enrollment decreases. Concordia College realized the greater percentage increase

in students among the private colleges and universities, with a 17.8 percent increase in headcount enrollment. Warner Pacific College experienced the largest percentage decrease in headcount enrollment (23.7%).

Among the independent and private colleges and universities, the General Academic category had the largest student enrollment, accounting for 24.4 percent of the total number of students. This particular category includes those students who have not officially declared a major field of study. Theology and Education with 11.9 percent and 9.8 percent of the total number of students enrolled respectively, follow the General Academic category as major fields of study enrolling the largest number of students. Six institutions reported all of their enrollments in one major field of study, three out of six listing Theology as the only area in which students were enrolled.

## V. COMMUNITY COLLEGES

There are 13 community colleges in the state of Oregon with a total enrollment of 67,069. The largest community college in the state, Portland Community College, enrolls 22,780 students or 34 percent of the total number of students enrolled in this educational segment. Portland Community College is followed by Mt. Hood Community College (9,732) and Lane Community College (8,300) in terms of headcount enrollment.

Community colleges enroll many more part-time students than do the State Department of Higher Education institutions or the private colleges and universities. For this reason, their full-time equivalent enrollment is much lower in relation to their headcount enrollment than in the other two educational segments. Portland Community College leads the community colleges in terms of full-time equivalent enrollment with 9,257.6 "FTE's", followed by Mt. Hood Community College (4,996.2) and Lane Community College (4,698.7).

By far, the great majority of community college students (91.2%) are residents of their particular community college district. Only .9 percent of the total number of students are classified as out-of-state students, while the remaining 7.9 percent of the students reside within Oregon, but outside of the district of the community college which they attend. Treasure Valley Community College claims the largest percentage of out-of-state students (14.2%), the majority of which come from the state of Idaho. Clatsop Community College has the largest percentage of in-state, but out-of-district students (28.4%).

The only educational segments to realize increased enrollments over

the Fall 1971 levels was the community college segment. Total headcount enrollment for this segment, in the Fall of 1972, was 8.2 percent higher than the previous year, while total full-time equivalent enrollment was up by 2.9 percent. Central Oregon Community College had the largest percentage increase (124.7%) in headcount enrollment, while Rogue Community College claimed the greatest percentage increase (34.7%) in full-time equivalent enrollment. Only two community colleges, Blue Mountain and Lane, experienced decreases in total headcount enrollment, although six institutions had fewer full-time equivalent students than last year.

The largest vocational program area at the community college level was the Trades and Industrial occupations, which claimed 42.4 percent of total full-time equivalent enrollment. Three other program areas with relatively large percentages of full-time equivalent students were: Office Occupations (15.2%); Health Occupations (15.0%); and Technical Education (14.7%).

## VI. PROPRIETARY SCHOOLS

The reported enrollment of the proprietary schools during the Fall term of 1972 was 11,788 representing an 18.3 percent increase over reported enrollment in the Fall of 1971. This rate of enrollment growth may be somewhat understated due to the lower survey response rate this year. Out of the 136 institutions to which enrollment surveys were sent, 92 institutions responded. This 68 percent response rate is significantly lower than last year's 78 percent rate of response.

Proprietary school enrollment data has been broken down by program area for the first time this year. The proprietary schools reported enrollments by their own particular program names. These programs were then classified into one of five U.S. Office of Education vocational program categories. A special category - Other Areas of Study - was added to accomodate those programs which did not fit into one of the five vocational categories.

The program area with the largest concentration of proprietary school students was the Trade and Industrial occupations, accounting for 58.1 percent of total Fall term enrollment. It should be noted, however, that many of the schools enrolling large numbers of students in this program area included correspondence programs in their enrollment reports. The Trade and Industrial Occupations are followed by Office Occupations and Health Occupations, with 16.7 and 10.5 percent of the total number of students respectively, as program areas with the greatest number of students.
